

Alfredo E. Hoyos M.D.

Dr. Alfredo Hoyos is a Plastic Surgeon from Bogotá, Colombia, studied in the Rosario University and Plastic Surgery in the Rosario – Saint Joseph Hospital in Bogotá, Colombia.

Inventor of High Definition Liposculpture (VHD).

VHD is a aesthetic refinement of liposuction that introduces a combination of superficial, intermediate and deep extraction and fat grafting with VASER technology which results in high muscle definition in both men and women. Dr. Hoyos and his associates have performed more than 1200 procedures with positive results, and without increasing the rate of complications. Dr. Hoyos continues to refine these techniques as well as develop and create new applications of VHD to additional anatomical regions. In addition, Dr. Hoyos continues to develop new technologies in the aesthetic surgery field.
